Introduction

This report is a supplement to my computer science portfolio, which was submitted as part of the portfolio as a student job open all to everyone. Some of the things it includes are my CV (resume), personal projects and a github page site,

A short general overview of my engineering experience and tech stack. The aim of this report is generalisation of design, structure and content of the portfolio; to justify the choices in building it; to justify instruments and technology utilised; and to reflect on the benefits and drawbacks of the current submission.

Portfolio URLs

Portfolio Website

The live portfolio website is hosted via GitHub Pages and can be accessed at:

<https://islembed15.github.io/protfolio/>

GitHub Repository

All source files — including the HTML/CSS, images, CV, and project materials — are stored in the following public GitHub repository:

<https://github.com/islembed15/protfolio>

Structure of the Portfolio Website and Repository

Website Structure

The portfolio is a one page website split into six, clearly labelled sections. Accessed through the fixed navigation bar at the top of the page:

1. **Home** — A pleasant, hero section introducing my name and profession with links to my social profiles (GitHub, LinkedIn, X/Twitter, GitLab).
2. **About** — A short personal background on who I am and where I study. Between GISMA University, language skills and hobbies. A language. There is also shown the proficiency summary.
3. **Skills** — A quick glance of the programming languages and technologies that I use. Technical Skills: Four languages (Python, Java, C++, HTML5, CSS3, Git, SQL) and not to mention Soft skills. Like Team collaboration, Time Management, and Self Learning.
4. **Resume** — A brief description of my academic background. at GISMA University, 2025–2029) and work experience (accountant in Algeria, cashier role) and a link to download the whole AltaCV PDF.

Repository Structure

The GitHub repository is organised as follows:

File / Directory	Description
<code>index.html</code>	Main single-page HTML document
<code>style.css</code>	Custom stylesheet for layout and theming
<code>images/</code>	Profile photo and any graphic assets
<code>CV/</code>	LaTeX-generated AltaCV PDF
<code>README.md</code>	Repository description and usage notes

Design Decisions

Single-Page Layout

We kept it simple with a one pager, minimal user environments. Hiring managers can You can scroll all content in a single page, which less friction and keeps the experience fast.

Navigation Bar

They also have a fixed top nav with "smoth-scroll" anchor links to each section. This en- The ensures that visitors can skip straight to the information most pertinent to them, such as clicking on Projects or Resume directly — without having to scroll manually through irrelevant content.

Clean and Professional Visual Theme

The colour scheme is a dark-red accent on white — mimicking the colour scheme of the AltaCV-generated CV. Doing so creates a visual consistency between their website and the PDF, supporting consistent messaging across their personal brand.

Responsive Layout

The webpage uses a responsive CSS layout so that it adapts to different screen sizes, including mobile devices. This ensures the portfolio looks presentable whether viewed on a laptop, tablet, or smartphone. A responsive CSS layout witnessing the page scales in different sizes of screens including mobile devices. Such a way that it will make the portfolio look presentable — whether she is on a laptop, tablet, or smartphone.

GitHub Pages Hosting

After selecting a static page generator, we decided to host on GitHub Pages which is well integrated with the It is free, does not require any server setup, and automatically deploys the contents of a repository when new commits are pushed to the main branch

LaTeX-Created CV

This CV is made using the AltaCV LaTeX template. LaTeX was chosen Because it produces well-formatted documents, LaTeX is used extensively in research and academic This information should also be available as a PDF and if so, this PDF can be either embedded in or linked from the dataspiders on technical contexts portfolio without quality loss.

Tools and Technologies

To create this portfolio, the following tools and technologies were used:

- **HTML5 & CSS3** —
- **Git & GitHub** —
- **GitHub Pages** —
- **LaTeX (AltaCV template)** —
- **Devicons CDN** —
- **Visual Studio Code** —

Reflection: Strengths and Weaknesses

Strengths

- **Consistent personal branding.** The colours and fonts match. It also helps to create a coherent image—the website and the CV talk to each other when the hiring manager sees them both.
- **Complete content.** All There is for you to fill up — bio, skills, projects, Resume. Being able to find the information in these pages — company name, address and contact details are all clearly labelled.
- **Accessible via public URLs.** The website and GitHub repository are respectively available for free access, it allows evaluators to easily moderate things without creating a login.
- **LaTeX CV.** Familiarity with professional docs. The AltaCV based CV. The tools are very usual across academic and technical sectors.
- **Multilingual profile.** Fluently speaking in Arabic, English and the level of French and German.

Weaknesses and Areas for Improvement

- **No live project demos.** There are two projects mentioned (Student Management System and Weather Application). These both have not hosted demos or a detailed README page in dedicated repository yet. The portfolio could be so much stronger with adding live demos or at the very least well documented repos/screenshots.
- **Limited JavaScript interactivity.** Current portfolio is made using only HTML/CSS. Incorporating interactive elements (like a filterable project grid or an animated More tangible evidence of front-end development skills (for example, skill-progress bar)
- **No dedicated project repositories.** Links to projects are currently routed to the generic If we talk about repositories, it is all-¿ GitHub profile not each repository with code and documentation.

- **Accessibility improvements.** Some images contain no alt text attribute. Adding these will make it more accessible by a screen reader and take care of search-
- **Future additions.** Intentions for upcoming iterations include a blog section to express progress, certifications (such as online courses), and new projects when they are developed throughout the B.Sc. programme.

Conclusion

The purpose of this portfolio is to showcase my technical skillset and education as a first year Computer Science student at GISMA University, Berlin. It is hosted at:

islembed15.github.io/protfolio and stored in a public GitHub repository. Your design decisions should prioritise clarity, consistency and navigation of a hiring manager. The portfolio does however lay down a solid baseline for future improvement — most notably covering the ability to demonstrate projects live and engaging more deeply with interactivity, but something that will develop as my studies and practical experiences grow.
